

Assignment 4

Dynamic Host Configuration Protocol

By Ziming Song

zs2815@nyu.edu

Part 1: Configuring DHCP

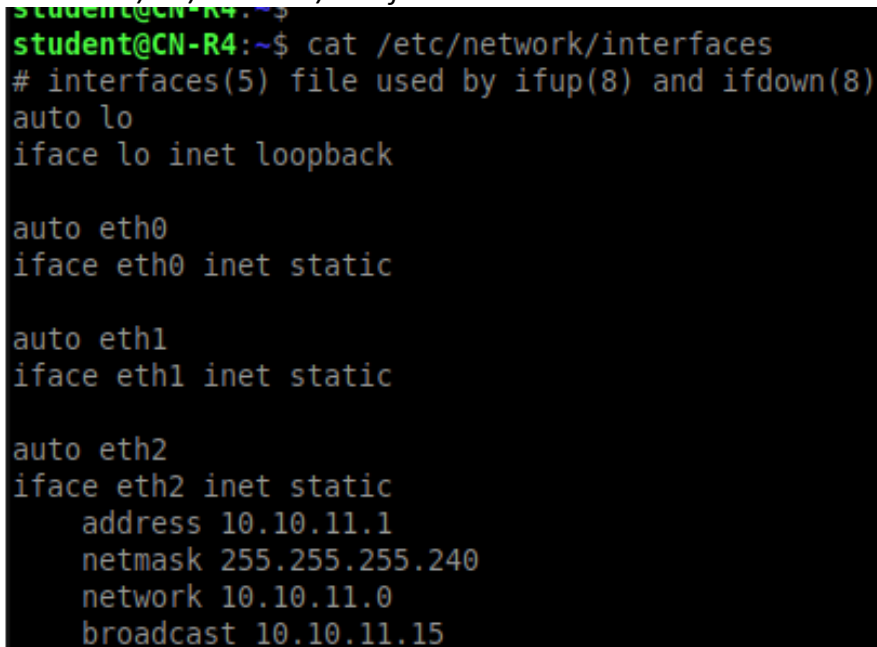

R4:

```
sudo nano /etc/dhcp/dhcpd.conf
```

add below lines at the end of the file:

```
subnet 10.10.11.0 netmask 255.255.255.240 {  
    range 10.10.11.1 10.10.11.14;  
    option subnet-mask 255.255.255.240;  
    option routers 10.10.11.1;  
    option broadcast-address 10.10.11.15;  
    default-lease-time 300;  
    max-lease-time 7200;  
}
```

```
sudo nano /etc/network/interfaces
```

```
student@CN-R4:~$  
student@CN-R4:~$ cat /etc/network/interfaces  
# interfaces(5) file used by ifup(8) and ifdown(8)  
auto lo  
iface lo inet loopback  
  
auto eth0  
iface eth0 inet static  
  
auto eth1  
iface eth1 inet static  
  
auto eth2  
iface eth2 inet static  
    address 10.10.11.1  
    netmask 255.255.255.240  
    network 10.10.11.0  
    broadcast 10.10.11.15
```

Part 2: Server Interface

```
student@Ubuntu:~$ ping 10.10.11.1
PING 10.10.11.1 (10.10.11.1) 56(84) bytes of data.
64 bytes from 10.10.11.1: icmp_seq=1 ttl=64 time=0.307 ms
64 bytes from 10.10.11.1: icmp_seq=2 ttl=64 time=0.629 ms
64 bytes from 10.10.11.1: icmp_seq=3 ttl=64 time=0.407 ms
64 bytes from 10.10.11.1: icmp_seq=4 ttl=64 time=0.501 ms
64 bytes from 10.10.11.1: icmp_seq=5 ttl=64 time=0.483 ms
64 bytes from 10.10.11.1: icmp_seq=6 ttl=64 time=0.451 ms
^C
--- 10.10.11.1 ping statistics ---
6 packets transmitted, 6 received, 0% packet loss, time 83ms
rtt min/avg/max/mdev = 0.307/0.463/0.629/0.097 ms
```

Part 3: Verifying DHCP and Wireshark

sudo systemctl status isc-dhcp-server.service

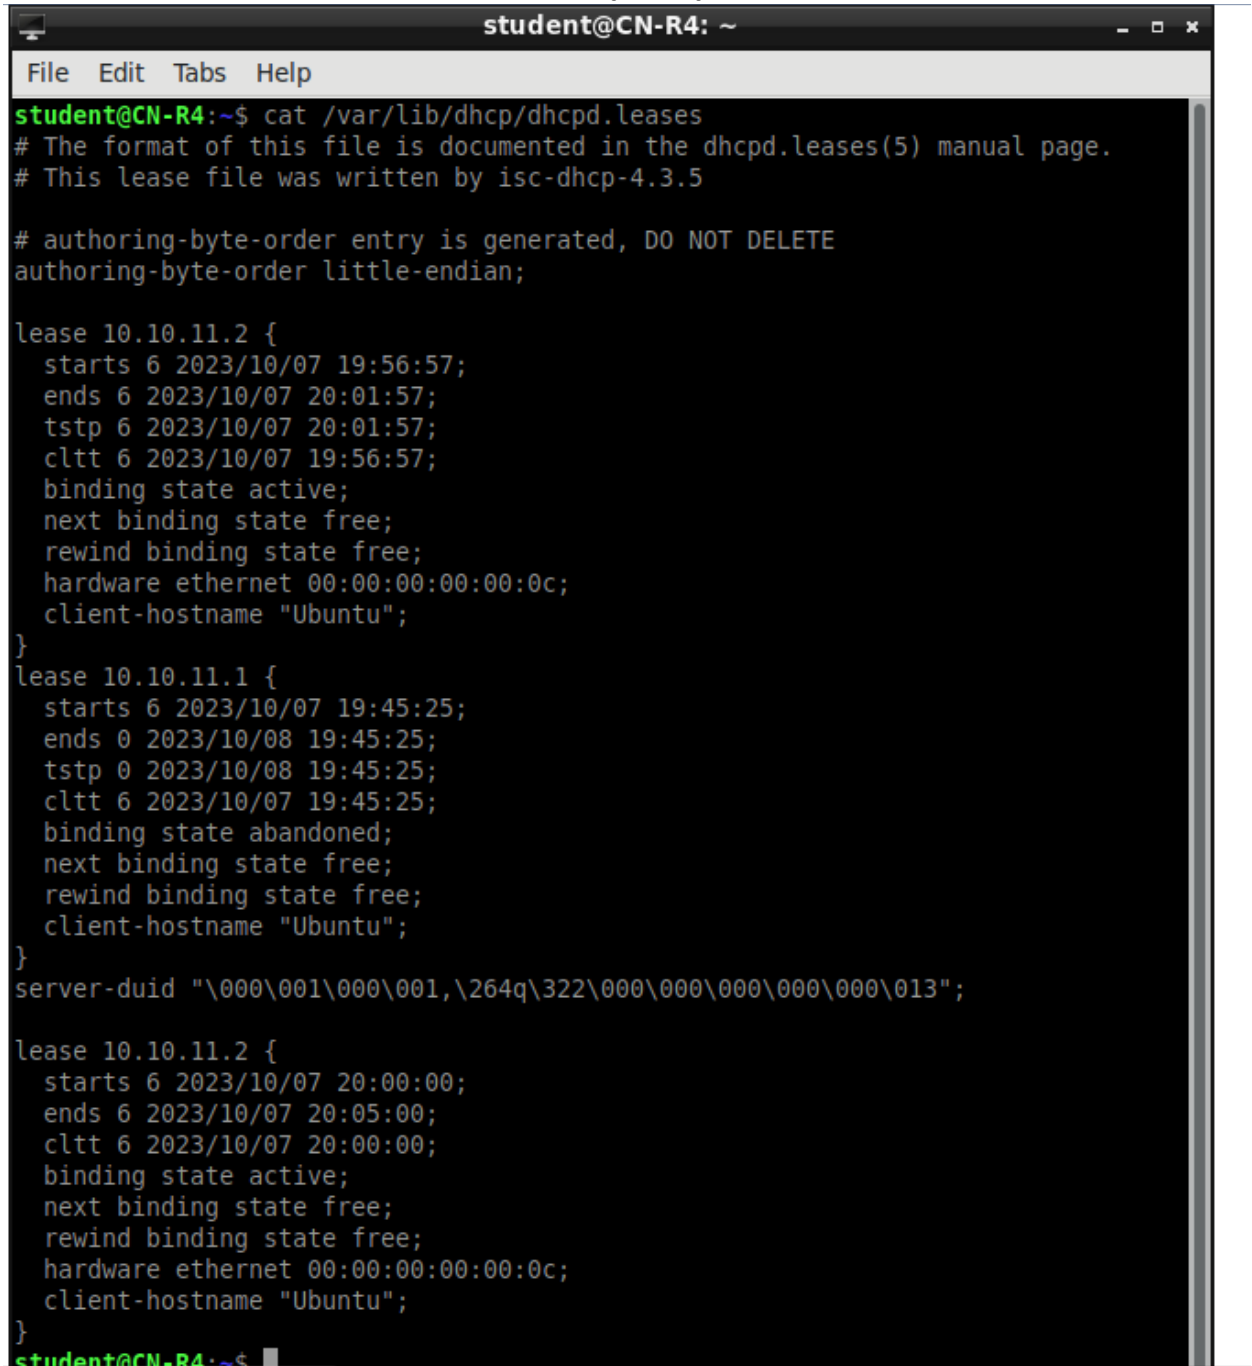

Screenshot:

```
student@CN-R4:~$ sudo systemctl status isc-dhcp-server.service

Submission

- a. The leases file on R4 found in `/var/lib/dhcp/dhcpd.leases`.

A terminal window titled 'student@CN-R4: ~' with a menu bar (File, Edit, Tabs, Help). The terminal displays the output of the command 'cat /var/lib/dhcp/dhcpd.leases'. The output shows DHCP lease information for three IP addresses: 10.10.11.2, 10.10.11.1, and 10.10.11.2. Each lease entry includes start/end times, timestamps, client identifiers, and binding states. The client hostname for all is 'Ubuntu'. The server-uid is also displayed.

```

b. Your configuration for the DHCP.

```
student@CN-R4:~$ cat /etc/dhcp/dhcpd.conf
#
# Sample configuration file for ISC dhcpd for Debian
#
# Attention: If /etc/ltsp/dhcpd.conf exists, that will be used as
# configuration file instead of this file.
#
#
# The ddns-updates-style parameter controls whether or not the server will
# attempt to do a DNS update when a lease is confirmed. We default to the
# behavior of the version 2 packages ('none', since DHCP v2 didn't
# have support for DDNS.)
ddns-update-style none;

# option definitions common to all supported networks...
#option domain-name "example.org";
#option domain-name-servers ns1.example.org, ns2.example.org;
#option domain-name "example.org";
#option domain-name-servers ns1.exaple.org, ns2.exaple.org;

#default-lease-time 600;
#max-lease-time 7200;

# If this DHCP server is the official DHCP server for the local
# network, the authoritative directive should be uncommented.
#authoritative;

# Use this to send dhcp log messages to a different log file (you also
# have to hack syslog.conf to complete the redirection).
log-facility local7;

# No service will be given on this subnet, but declaring it helps the
# DHCP server to understand the network topology.

#subnet 10.152.187.0 netmask 255.255.255.0 {
#}
```

```
# which we don't really recommend.
```

```
#subnet 10.254.239.32 netmask 255.255.255.224 {  
#  range dynamic-bootp 10.254.239.40 10.254.239.60;  
#  option broadcast-address 10.254.239.31;  
#  option routers rtr-239-32-1.example.org;  
#}
```

```
# A slightly different configuration for an internal subnet.
```

```
#subnet 10.5.5.0 netmask 255.255.255.224 {  
#  range 10.5.5.26 10.5.5.30;  
#  option domain-name-servers ns1.internal.example.org;  
#  option domain-name "internal.example.org";  
#  option subnet-mask 255.255.255.224;  
#  option routers 10.5.5.1;  
#  option broadcast-address 10.5.5.31;  
#  default-lease-time 600;  
#  max-lease-time 7200;  
#}
```

```
# Hosts which require special configuration options can be listed in  
# host statements.  If no address is specified, the address will be  
# allocated dynamically (if possible), but the host-specific information  
# will still come from the host declaration.
```

```
#host passacaglia {  
#  hardware ethernet 0:0:c0:5d:bd:95;  
#  filename "vmunix.passacaglia";  
#  server-name "toccata.fugue.com";  
#}
```

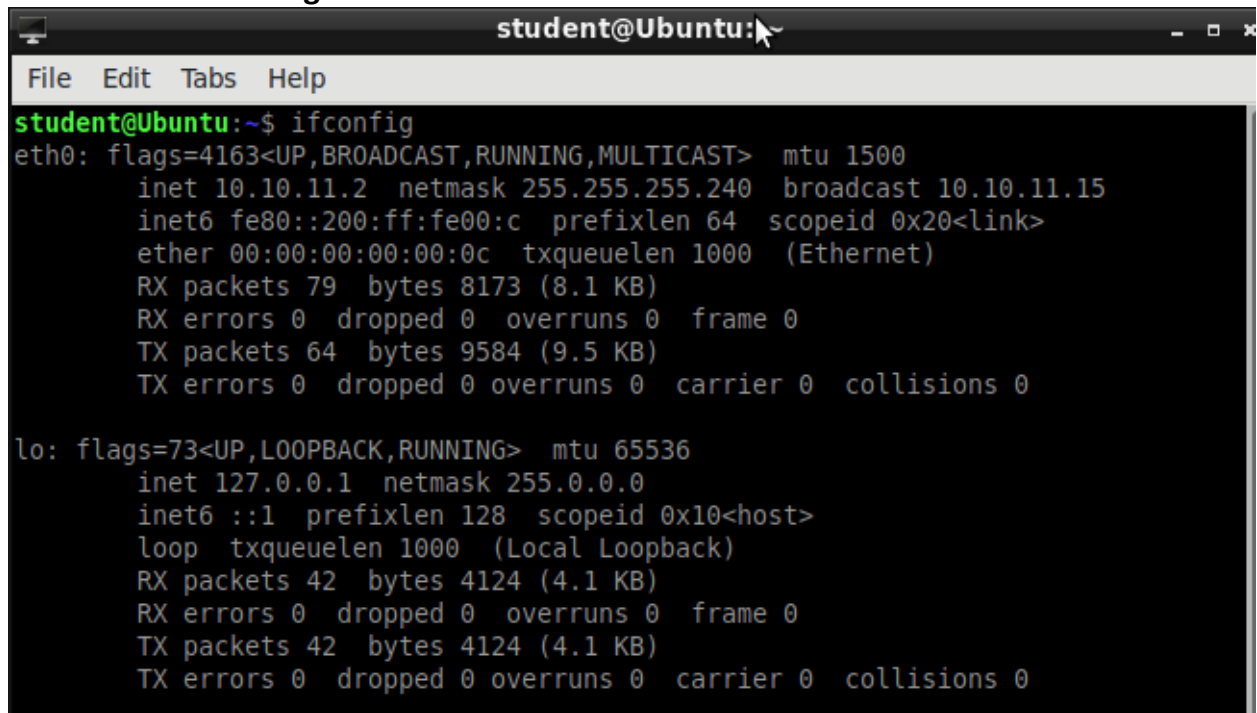

I

```
# Fixed IP addresses can also be specified for hosts.  These addresses  
# should not also be listed as being available for dynamic assignment.  
# Hosts for which fixed IP addresses have been specified can boot using  
# BOOTP or DHCP.  Hosts for which no fixed address is specified can only  
# be booted with DHCP, unless there is an address range on the subnet  
# to which a BOOTP client is connected which has the dynamic-bootp flag  
# set.
```

```
#host fantasia {  
#  hardware ethernet 08:00:07:26:c0:a5;  
#  fixed-address fantasia.fugue.com;
```

```
student@CN-R4: ~  
File Edit Tabs Help  
# be booted with DHCP, unless there is an address range on the subnet
